**TekLink** Lighting Control Systems

TekLink TL200 "Lite" Wireless Control System

TekLink TL200 is a wireless control system that requires NO commissioning - it works right out of the box. Once motion is detected by one luminaire, the adjacent fixtures in range respond to the occupancy event. This group occupancy detection prevents the single-fixture "cascade-on" effect common to other control systems. TL200 does not require any additional external devices. Simple setting adjustments are made via the TekLink mobile app.
